

MAST QUADRANT™

Retractor System

The global leader in today's spine market, we combine our lifestyle friendly Minimal Access Spinal Technologies (MAST™), integrated image-guided products and neural monitoring tools to potentially help surgeons shorten surgical and recovery time and return patients more quickly to normal, active lives.

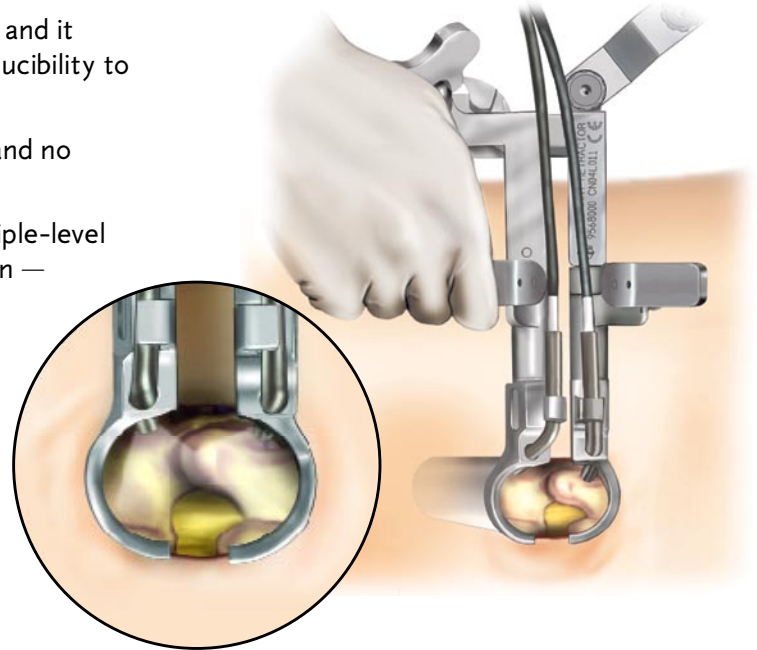

- MAST™ Capable
- Navigation Compatible
- NIM-SPINE® Monitor Ready

The MAST QUADRANT™ Retractor System provides surgeons with next-generation technology that will revolutionize the future of spine care.

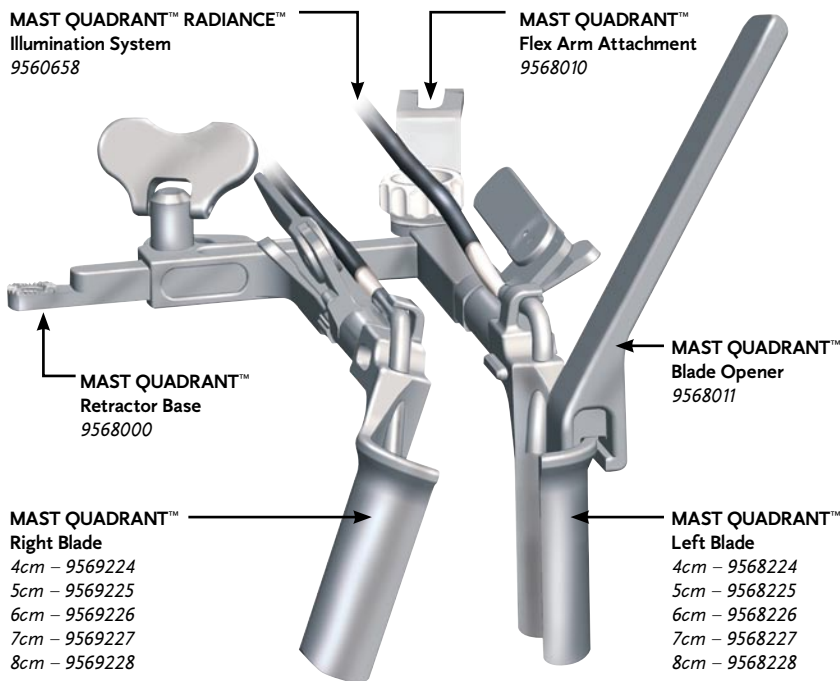

The Latest, Most Versatile and Reproducible Access System that may be used for Fusion Surgery

- Allows access for fusion and fixation in one approach, and it provides the surgeon with more versatility and reproducibility to perform fusion surgery with confidence.
- Features a familiar dilation technique for ease of use and no additional operating room time.
- Provides user-friendly approaches to single- and multiple-level fusion procedures, with multiple modes of visualization — microscopes, loupes, and direct visualization.
- Fully compatible with all standard neuromonitoring systems including the NIM-SPINE® System.

This Retractor System is an extension of minimal access spinal technologies (MAST™). With the addition of interbody options and a CD HORIZON® Cannulated Screw, a complete, reproducible, minimally invasive procedural solution is achieved.
